

Title: Refactoring a Broken Flask Note Taking Application

- **Bug 1:** Home route did not allow GET requests Fixed by adding GET method.
- **Bug 2:** Incorrect usage of request arguments Replaced request.args with request.form.
- **Bug 3:** Empty notes added to list Added validation before appending notes.
- **Bug 4:** HTML form missing POST method Added method="POST".
- **Bug 5:** Submit button type not specified Explicitly set button type to submit.

Conclusion: The application was successfully refactored to allow users to add and view notes dynamically on the same page.
